The Growing Demand for Customized Testing Solutions Calls for Innovating on the Go

With disruptive new technologies continuously setting the bar higher, it is becoming increasingly clear that when it comes to testing, one size simply does not fit all. Hence there is a steadily growing demand for made-to-measure solutions. As Orbis Systems' Sales Director Janne Mäki-Petäjä accurately puts it: "As each customer

has to consider factors like its own unique market position, product offering and ramp up schedule, it is no wonder that the test solutions used in their R&D and manufacturing must be customized to suit very specific needs.”

Delivering customer-specific solutions is familiar territory for Orbis Systems. Sometimes solutions are literally custom-built from start to finish according to a detailed specification, whereas another option is to use a platform solution, such as [a modular Signal Switching Unit](#) or an [OTA testing chamber](#), as basis for customization and then modify it to meet the customer’s requirements. This could mean anything from customizing individual elements like safety features to adding equipment in order to build a more complex test system, or even selecting the entire setup and structure of the platform based on demands set by the testing environment. "We innovate on platforms and innovate platforms on the go, depending on what the customer wants", Sales Director Mäki-Petäjä describes Orbis Systems' approach to customization.
